

Cognitronics

CLASSIFICATION: CONFIDENTIAL

Date: August 8th, 2026

Subject: Cognex System Capture Station (MVP)

Recipient(s): Pre-seed round investors & their legal counsels

CONFIDENTIAL INFORMATION AND INVENTION ASSIGNMENT AGREEMENT

CONFIDENTIAL INFORMATION AND INVENTION ASSIGNMENT AGREEMENT

This Confidential Information and Invention Assignment Agreement (this "Agreement") is entered into as of **August 8th, 2026** (the "Effective Date"), by and between:

- **COGNICS SYSTEMS, Inc.**, a Delaware corporation (the "Company"),

and

- **Mr THOMAS MANRIQUE**, an individual residing at 36B chemin de Belbèze, 31240 Saint Jean, France (the "Founder").

This Agreement supersedes and replaces the Confidential Information and Invention Assignment Agreement previously executed in connection with the Company's incorporation.

RECITALS

WHEREAS, the Company is the parent holding company of a corporate group whose mission is to develop advanced embodied AI, robotics middleware, semantic capture systems, and related secure runtime infrastructure marketed under the **Cognitronics** brand;

WHEREAS, the Founder is the sole founder, director, and chief executive officer of the Company and will develop intellectual property **within a defined technical field** for the benefit of the Company and its subsidiaries (including any future operational subsidiary, e.g. a French SAS/SASU conducting robotics R&D);

WHEREAS, the Founder is an experienced builder with projects and expertise **outside** that field (including prior Web3 and cryptography work), and the parties intend that **only Field IP** (as defined below) be assigned to the Company — not the Founder's unrelated personal or prior projects;

NOW, THEREFORE, in consideration of the Founder's relationship with the Company, the receipt of equity pursuant to a Restricted Stock Purchase Agreement, and other good and valuable consideration, the parties agree as follows:

1. DEFINITIONS

1.1 "Assigned Field" means research, development, and commercialization of:

- humanoid and general-purpose robotics, teleoperation, and robot training data pipelines;
- embodied AI, vision-language-action (VLA) systems, semantic supervision, and capture-time annotation for robotics;
- simulation, domain randomization, policy benchmarking, and sim-to-real transfer for robotic manipulation and navigation;
- robotics middleware (including ROS2 integration), Jetson/embedded robot runtime, and hardware–software integration for robots;
- **TrustVault** and **Cognex** as Company products: owner-controlled encrypted household/robot memory, permissioned context APIs, structured embodied datasets, and semantic capture layers **when deployed in connection with robots or embodied AI systems**;
- tooling, datasets, models, and software created **specifically for the above**, including under the Cognitronics / Cognitronics Systems / Cognics group.

1.2 "Excluded Field" means all subjects **outside** the Assigned Field, including without limitation:

- standalone Web3, DeFi, NFT, token, wallet-recovery, or blockchain-protocol products **not integrated into Company robotics products** (including **Web3Safer** and the **RBM (Remote Burn Mechanism) Protocol** as standalone Web3 projects);
- unrelated game development, personal hobby software, and non-robotics consumer applications;
- any invention that does not materially relate to robotics or embodied AI as described in Section 1.1.

1.3 "Confidential Information" means non-public Company information disclosed to or created by the Founder in connection with the Company group, including technical, business, and fundraising information. Standard exclusions apply (public domain, prior knowledge, lawful compulsion with notice).

1.4 "Field Invention" means an Invention that:

- (a) falls within the **Assigned Field**; and

(b) is conceived or reduced to practice:

- while performing services for the Company or any subsidiary; **or**
- using Company or subsidiary equipment, funds, Confidential Information, or other resources; **or**
- at the specific direction of the Company or its board; **or**
- in direct furtherance of a documented Company product roadmap (Cognex, TrustVault-for-robots, or related robotics R&D).

1.5 "Retained Invention" means any Invention that is **not** a Field Invention, including all Inventions in the **Excluded Field**, whether created before, on, or after the Effective Date.

1.6 "Invention" has the ordinary meaning of inventions, software, works of authorship, designs, know-how, and other intellectual property.

2. RETAINED INVENTIONS — DEFAULT RULE

2.1 Founder Retains Excluded Field. The Founder **retains all right, title, and interest** in Retained Inventions. The Company claims **no ownership** of Retained Inventions by virtue of this Agreement.

2.2 No Disclosure Obligation for Retained Work. The Founder is **not required** to list all personal or prior projects on an exhibit. Exclusion from assignment follows from the **Assigned Field / Excluded Field** definitions, not from a comprehensive prior-invention schedule.

2.3 Web3Safer / RBM. Without limiting Section 2.1, **Web3Safer** and the **RBM Protocol** are acknowledged as Founder projects in the **Excluded Field**, unless and until the board approves a specific integration into a Company robotics product in writing.

2.4 No Incorporation Without Consent. The Founder shall not incorporate Retained Inventions into Company products without **prior written board approval**. If approved, the parties will document license or acquisition terms separately — this Agreement does not assign Retained Inventions by default.

2.5 Pre-Incorporation Robotics Work. Work in the Assigned Field performed by the Founder in the approximately **six (6) months** before incorporation **in furtherance of the Cognitronics robotics mission** constitutes **Field Inventions** and is assigned under Section 3, even if created before the Effective Date.

2.6 Outside Activities. The Founder may engage in personal projects, consulting, research, and product development in the **Excluded Field** on the Founder's own time, using the Founder's own resources and without use of Company Confidential Information, equipment, or funds; any Invention arising from such outside activities remains a **Retained Invention** and is **not** assigned to the Company under this Agreement, provided that the Founder continues to fulfill duties to the Company and complies with Sections 2.4 and 4.

3. ASSIGNMENT OF FIELD INVENTIONS

3.1 Assignment. The Founder hereby assigns to the Company all Field Inventions, including all intellectual property rights therein, worldwide.

3.2 Subsidiaries. The Company may license or sublicense Field Inventions to subsidiaries (including any French operational company) for R&D and commercial operations under intercompany agreements.

3.3 Moral Rights; Further Assurances. Standard moral-rights waiver (to extent permitted) and further-assurances / power-of-attorney provisions apply **only to Field Inventions**.

3.4 French Law. To the extent a Field Invention cannot be assigned under French law, the Founder grants the Company an exclusive, perpetual, worldwide, royalty-free, sublicensable license for robotics/embodied-AI use.

4. CONFIDENTIALITY

The Founder shall protect Company Confidential Information during and after the relationship. This obligation does **not** restrict the Founder's independent development in the Excluded Field, provided no Company Confidential Information is used.

5. NON-SOLICITATION

For **twelve (12) months** after termination of services, the Founder shall not solicit Company employees or contractors to leave the Company. (Standard scope; does not restrict unrelated businesses.)

6. REPRESENTATIONS

The Founder represents that:

- Field Inventions assigned hereunder are assignable and, to the Founder's knowledge, do not infringe third-party rights;
 - the Founder will not use Retained Inventions in Company products without board approval (Section 2.4);
 - the Founder is not bound by any prior agreement that would prevent assignment of **Field Inventions** to the Company.
-

7. GOVERNING LAW

Delaware law governs corporate and assignment matters; French law may apply to the Founder's personal status. Disputes: Delaware courts, subject to emergency relief elsewhere.

8. GENERAL

Entire agreement; severability; amendments in writing; counterparts and e-signatures permitted.

EXHIBIT A — ASSIGNED FIELD (SUMMARY)

Non-exhaustive summary for readability; Section 1.1 controls.

In scope (assigned if criteria in §1.4 met)	Out of scope (retained by Founder)
Cognex semantic capture & embodied datasets	Web3Safer (standalone Web3 product)
TrustVault for robot/household embodied context	RBM Protocol (standalone Web3)
ROS2 / Jetson robot runtime integration	Unrelated DeFi / wallet / token products
MuJoCo / simulation / policy benchmarks	Personal hobby code unrelated to robotics
Teleoperation & operator-tracking for robots	Future non-robotics startups / side products
Cognitronics-branded robotics R&D	Generic cryptography tools not tied to Company robotics

Founder Initials: T.M. Date: 08 / 08 / 2026 (DD/MM/YYYY)
